

With the PMS kit, it is quick and simple to check the specific gravity of your gasoline for quality and legality. This kit is a real aid for the racer using additives or special blends. With the decreasing quality of today's pump gas, a Gas Check Kit should be a standard item with all racers.

KIT CONSISTS OF:

- * Easy to read lab-grade hydrometer graduated in 0.002 increments and a range from .700 to .800
- * Mercury thermometer with self-contained protective case
- * 50 ml graduated glass cylinder
- * Easy-to-follow instructions

NOTE: This range will allow the racer to check all pump gas, all racing gas, straight methanol, and all but the lightest aviation gas. The kit will NOT check Nitromethane alky/nitro mixtures

A balance scale is a precision tool that every serious engine builder should own and use. A balance scale allows the builder to keep accurate weight records of pistons, pins, rods, etc. By keeping a record of such weights, it is simple to duplicate original weights when replacing worn or damaged parts.

FEATURES INCLUDE:

- * Designed for speed and ease of operation
- * Magnetic damping
- * Sensibility of 0.1 gram
- * Self-aligning agate bearings and hardened steel knife edges permit friction-free movement
- * Comes complete with accessory weight kit which increases capacity to 2610 grams
