

Pinion Depth Setting Tool

After many hours of development and testing, we have devised a truly universal pinion setting fixture – without the use of spools, bars, etc. Tool is quick to set up and is ACCURATE.

Mounting distances are provided for many rearends, enabling the operator to set up factory gears that are not marked for pinion depth.

Will work on any gear set if pinion depth is marked.

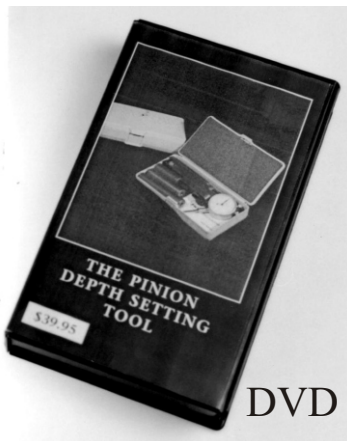

**Works on GM 10 & 12 bolts
Early GM ~ Ford 9”
Chrysler 8 3/4”~
Dana ~ Many Others**

Complete kit includes indicator and step-by-step instructions with easy to follow photos.

Pinion Depth Setting Tool Video

This is a step-by-step instructional video covering the set up and use of the Pinion Depth Setting Tool, along with difficult to obtain rearend buildup procedure and information including:

- *Gear Nomenclature**
- *Gearset Applications**
- *Patterns**
- *Helpful Hints**
- *Torque specifications**

DVD

Yoke Support for Pinion Nut

This fixture is a big help when it comes to torquing the pinion nut on a 9” Ford (works on others as well). Eliminates the need for pipe wrenches, etc. and saves a lot of skinned knuckles. Made of aluminum and anodized for appearance and durability.
